

Better Digital Lending with Glyue

CHALLENGE

BankNewport wanted to digitize the end to end staff and customer experience across their business lines with a focus on creating efficiencies and reducing risk. Aiming for a platform approach, the Bank decided to implement several modules of nCino (a Salesforce-based system) with a requirement for connectivity to several other third-party applications used by the Bank; most importantly its core platform, COCC Insight.

nCino was tasked with reducing duplicate data entry and simplifying handoffs between bank colleagues and systems. Voted one of Rhode Island's Best Places to Work, BankNewport wanted to eliminate manual effort, create efficiencies and focus on serving customers through digital transformation.

THE ASK

1. Auto-book loan and customer records from nCino to the Bank's core system. Sync data between nCino & other third-party apps as needed.
2. Be maintained and extended by BankNewport's IT department.

BankNewport initially focused on their marine lending business line rollout of nCino as the first internal use-case before expanding Sandbox to connect other workflows. The delivery teams found a few workflows mid-project that needed to be digitized as part of MVP. Sandbox Banking's Glyue platform was flexible enough to allow the Bank to add in these workflows without impacting delivery.

"Sandbox Banking was selected due to their experience in connecting nCino with core platforms like COCC Insight. Sandbox has been an ideal business partner – offering thoughtful, responsive guidance in a professional, efficient and fair manner. Sandbox Banking offers far more than API connectivity – they are surprisingly well-versed in banking in general and are passionate about growing the client's business."

John Sullivan | BankNewport, CIO

THE GLYUE SOLUTION

Sandbox Banking's low-code integration platform called Glyue helps banks and credit unions connect fintech products into existing systems.

Glyue's Adapter & Solution Templates reduce the development time associated with integrations by 80%. We've partnered with major core banking, LOS vendors, and other fintechs for customers to hit the ground running.

Financial Institutions increasingly use Glyue's data integration and API management capabilities as an Integration Platform as a Service for Banking.

BUSINESS CASES

- **Improve speed-to-market and data security** by automating 'Core Booking' for loans and deposits
- **Create scalability** for future projects using Glyue's Adapter Library and Fintech Partnerships
- **Reduce costs** using productized integrations within Glyue's Solution Template catalog
- **Improve self-service capabilities** with Glyue's integrated AI assistants

RESULT HIGHLIGHTS

- Loan Booking time reduced by over 70%
- Redundant data entry eliminated across departments
- Increase digital transformation enthusiasm amongst staff

SOLUTION DELIVERY

Sandbox Banking worked with BankNewport over the course of 8 months in a phased approach that allowed Glyue to be configured for the Bank's specific marine loan workflow as the teams finished their work in the upstream systems. The Sandbox Banking team held weekly calls with BankNewport's nCino administrator and their loan operations team to discuss project status and provide support throughout the implementation. Sandbox Banking's experience meant that workflows could be parallelized more effectively.

KEY IMPACT

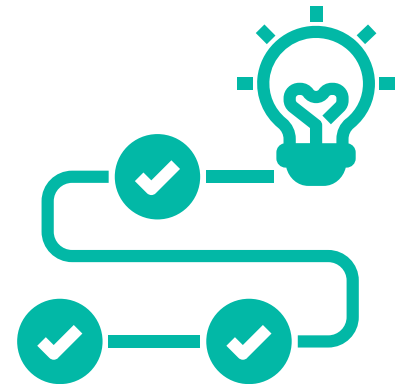

The integrations allow BankNewport to reduce the burden on its loan operations team while also reducing manual data entry errors. Sandbox Banking's audit log functionality allowed BankNewport's Salesforce administrator to easily diagnose errors and will allow the bank's IT teams to streamline management and external stakeholder eg: audit, counterparty reporting.

THE RESULTS

BankNewport initially focused on their OceanPoint Marine unit's rollout of nCino & AppOne as the first internal use-case before expanding Sandbox to connect other workflows. The delivery teams found a few workflows mid-project that needed to be digitized as part of MVP. Sandbox Banking's Glyue platform was flexible enough to allow the bank to add in these workflows without impacting delivery velocity. The Sandbox Banking team held weekly calls with BankNewport's nCino administrator and their loan operations team to discuss project status and provide support throughout the implementation.

Sandbox Banking's experience meant that workflows could be parallelized more effectively. The integrations will allow BankNewport to reduce the burden on its loan operations team by over 70% per loan while also reducing manual data entry errors.

Sandbox Banking's audit log functionality allowed BankNewport's Salesforce administrator to easily diagnose errors and will allow the bank's IT teams to streamline management and external stakeholder eg: audit, counter-party reporting.
